KILKIVAN Q 4600*

Dear Adrian,

I have just successfully completed a 320km Endurance Marathon Ride using the "toestoppers".

Being a rider who uses a cavalry style saddle, with fixed stirrups and guilty of riding in sandshoes – I am constantly aware of the dangers of becoming hooked up and dragged.

The "toestoppers" were easily fitted to my oxbows and throughout the week, did not require any attention or readjustments. The weather at times was wet and rainy, yet even after remounting and dismounting many times, I had no bother with them, despite the mud and shrubbery that I had stuck on my shoes.

The security that the toestoppers afford to you, as you traverse steep range country, is second to none. It was a comforting thought traveling along in the dark, secure in the knowledge that if the worse should happen, that being dragged was not one of my fears!!

The additional padding that is part of the design as it goes across the tread on the stirrup, gave additional comfort. It was like having a thin shock absorber under the ball of my foot and I noticed that I was less leg weary than I have been after completing much shorter rides.

My horse traveled very well throughout the ride and I am sure that this was in part due to the fact, that I was not constantly wriggling my feet around, trying to find a more comfortable position or trying to keep my feet from going too far through the irons.

I would thoroughly recommend the "toestoppers" to anyone in our sport. I wish you well in your promotion of them and believe you deserve an accolade for such a brilliant safety measure. If even one life is saved through using these items, then I am sure you will be justifiably proud.

All the very best with them,
Regards & Thanks,

Yvonne Knight
